SMART WASTE MANAGEMENT SYSTEM IN METROPOLITAN CITIES

New table

PROBLEM STATEMENT	I AM	I'M TRIYING TO	BUT	BECAUSE	WHICH MAKES ME FEEL
PS-1	sanitation workers	To Avoid overflow in dustbins, land fill , separation of types of waste	It is difficult to manage the dustbins which is overflowing .checking daily whether is full or empty .	if it is full being a garbage collector it is a difficult task while taking and separating	feeling uneasy
PS-2	Garbage collector	Avoid dumping , sensors for detecting fill level of trash	separating degradable and non-degradable is difficult, land fill cannot be easily cleaned	separating is difficult because dumping more and more cause bad smell, bugs and some infections	uncomfortable
